

FOR IMMEDIATE RELEASE

Introducing Production Data: The lightweight spreadsheet creation application crafted for Final Cut Pro

[Singapore, 14th September 2026] – Today, we are delighted to unveil Production Data, a lightweight spreadsheet creation application from the creator of Marker Data, crafted for Final Cut Pro users seeking a straightforward, native way to turn timeline metadata into structured production reports.

Production Data streamlines the way professionals translate Final Cut Pro's raw timeline data into polished, shareable spreadsheets, allowing editors, coordinators, producers, and directors alike to generate comprehensive Excel and PDF reports with ease.

Its use cases span production tracking, role inventory for sound editorial and mix, assistant editor clip and conform reports, VFX turnover and handoff sheets, client review workbooks, and dubbing and ADR role sheets, among others.

Core Features:

- **Excel Workbook Export:** Production Data allows the export of structured Excel workbooks (.xlsx) directly from Final Cut Pro timelines.
- **Precise Metadata Extraction:** Ensures an accurate representation of clips, roles, and production information drawn from the timeline.
- **Role-Based Inventory Sheets:** Built from audio and video roles on the timeline, with per-role enable and disable control.
- **Optional Report Sheets:** Covering Markers, Keywords, Titles & Generators, Transitions, Effects, Speed Changes, Summary, and Media Summary.
- **Role-Based Filtering Across Sheets:** A single role selection applies consistently across Role Inventory, Markers, Keywords, and other role-bearing sheets.
- **Multiple Configurations:** Create and switch between multiple configurations tailored to diverse project requirements, each with assignable keyboard shortcuts.
- **Drag and Drop Support:** Accepts drag and drop, as well as Final Cut Pro timeline drags, with automatic and manual export modes.
- **Organised Export Output:** Each export is saved to a uniquely named, timestamped folder within your chosen export destination.
- **Optional PDF Report Export:** A PDF report (.pdf) can be generated alongside the Excel workbook, using the same active Configuration settings.
- **Spreadsheet Compatibility:** Exported Excel workbooks are compatible with Apple's Numbers and other spreadsheet applications.
- **No Hidden Costs:** No subscriptions, no in-app purchases, and no recurring fees attached to continued use.

Production Data is available now on the Mac App Store for USD \$5.99, and requires macOS 26.0 or later, Final Cut Pro 12.0 or later, and runs exclusively on Apple silicon Macs.

Production Data is now available for download at <https://productiondata.theacharya.co>.

About The Acharya

The Acharya is an independent production company based in Singapore founded by Vigneswaran Rajkumar. Its current relentless pursuit is to develop and produce feature films for a distinctive global audience. With an unequivocal focus on Asian Cinema, it is engaged to bridge production opportunities and collaboration of various artistic disciplines in Asian and International landscape.
